**“ I build with AI,
but I design for
people—learning
should feel like
something you step
into, not something
you sit through.**

WHAT MESSAGES DO YOU CONVEY WITH YOUR ART?

My work explores the intersection of learning, technology, and human growth. I use AI to turn complex ideas into visuals and stories that feel approachable and useful. Each piece is designed to make innovation easier to understand, whether for a team, a leader, or a learner.

The goal is simple: create work that looks compelling, feels meaningful, and helps people move forward. Good design should teach something. When images, motion, and narrative come together, they build clarity and confidence.

Every project is about translating change into something people can connect with and apply in the real world.

WHAT TOOLS AND TECHNIQUES DO YOU USE?

I work primarily with AI-powered and digital tools to design, prototype, and produce visual stories. I create images, video, and multimedia experiences that bring ideas to life and make learning more engaging and accessible.

My process blends creativity with instructional design. I research, storyboard, iterate, and test concepts—approaching each project the way I would a learning solution. Art should do more than look good; it should communicate clearly and serve a purpose. I use technology to create work that informs, connects, and helps people grow.
